I am looking for a jones style plug for a new ham. It is a 15 pin female in a three across, 5 tall configuration. 5 on one side are verticle on one side while the remaining ones are horizontal. Below is a crude ascii sketch of the breast.

Anyone have one or know where I might go to get one?

Thanks

Recently my ham club had an auction. One of the members had died and left all his radio stuff to the club.

There were some modern items, and they sold for good prices. A trader bought two tables of tubes, presumably getting a bargain; but then he will have to sit on the collection until somebody comes along wanting to buy a tube here and there. And there was some test equipment and ex-military gear in pretty good shape that sold well - tube testers especially. And there were some boxes of resistors, capacitors, etc. that sold.

Now the rest of the stuff - this guy was a builder! Everything he built was really ugly, nothing you'd want to take home and use even if you could figure out how to get it working. But he built more stuff than I could imagine building in a lifetime. So there were more butchered up command sets and power supplies and coils and variable condensers and stuff than you could imagine. Must have been a dozen or more tuning units for BC-375, almost all converted to some other use, and buckets and buckets of parts from more of same. And after the stuff that sold well, it got down to a dollar for everything on that table, and you have to take everything on the table, and then we're loading up a trailer to take to the dump, so grab out anything you want now.

Now if we ever do this again, and chances are we will be doing it again some time, what should we do? If I had known there was so much old stuff there I would have tried to advertise the sale to the boatanchor crowd; but I

didn't know what there was until the night before the sale when I helped haul it to the sale site. We thought about hauling the leftovers to a flea market, but decided there was too much to haul and it was too junky looking to be worth the haul anyway.

Oops, did I mess that one up! I ment BEAST!
Sorry about that!

Here is some more info on the Jones socket my friend needs. It's the maller pins, a S315CCE socket, 1.795 inch wide, 1.170 inch high. If anyone had one they don't need and is cluttering up the place he sure could use it. I found it in Newark for \$6 or so, just have to either buy some other stuff to make the minimum or stop by next time passing through Lancaster. If anyone had one they don't need and is cluttering up the place he sure could use it.
